What is **E-magles**?

- **E-magles** is a GAFI-accredited system that aims to allow board members and shareholders of listed and unlisted companies to vote electronically.

- It enables companies to manage their voting processes.

- It relies on double authentication methods in order to verify the voters’ identities and ensure transparency and integrity.

- The feature allows all board members to participate in discussions and comment on items in meeting agendas.

- Through **E-magles**, all necessary documents are sent to board members and shareholders to view and comment on.

- **E-magles** doesn’t require any hardware as it is provided as SAAS.

- **E-magles** is compatible with MCDR systems for data collection.
Why E-magles?

- Confidentiality
- Environmentally Friendly
- Facilitates Internal Meetings
- Transparency
Parties involved and their roles

**Company Admin**

- The system also allows companies to select a member to create logins for voters, communicate with relevant parties and send out updates, among other things.

**Voters**

- Voters will be given credentials to access the system, vote, see invitations, RSVP to meeting and leave comments regarding the agenda items.
- It will log their physical location and will block all actions on their stock 5 days before the meeting in case they RSVP to come. Hence, they wouldn’t need to attend physically.

**GAFI**

- The system makes it easier for GAFI to follow up on registered companies’ agendas. The GAFI admin in charge of monitoring companies’ performance and financial standing can use E-Magles to approve, reject or comment on BOD decisions.
Thank You
